Web Development

A simple introduction to web development includes the building of basic html pages. In order to understand the basic concepts of html, follow the following tutorials.

Also an important component of building the html pages is styling them I.e. basically controlling what your websites will look like.

HTML & CSS Tutorials

While styling the html pages is an important skill. There are many tools available which simplify the task of using css style sheets again and again and simply use in line styling. Some of such tools are material ui, bootstrap etc. We will be following the bootstrap styling:

Bootstrap 5 Tutorials

This helping the creation of pages that look beautiful. But most modern websites depend on the idea of interaction with the user. In order to do that an avid knowledge of Javascript is necessary. Thus, knowing Javascript is an important pillar of web development:
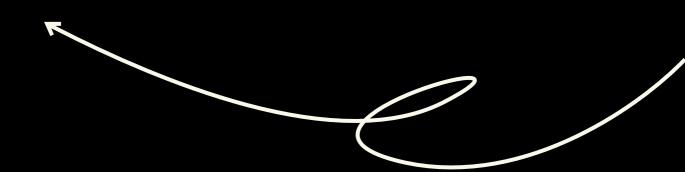

Javascript Tutorial

Tip: gaining a feel of the concepts is more important than learning the concept ad syntax can always be Googled 😉
